O QUE É?

O Observatório Orbital de Carbono (OCO) é uma missão espacial desenvolvida pela NASA para monitorar globalmente a coluna média de CO₂ (XCO₂). Atualmente temos em órbita o OCO-2 e o OCO-3

COMO?

Os sensores destas missões medem indiretamente a concentração de CO₂ pela absorção da luz eletromagnética das moléculas de O₂ e CO₂ em comprimentos de ondas específicos

CARACTERISTICAS

Resolução do sensor < 4 km²

Espaçadas
(problema?)

Crisp et al., 2017

CARACTERISTICAS

OCO - 2

- Revisa a a cada 16 dias na mesma condição de iluminação
- Órbita heliosincrona e quase polar (90 a 90°)
- Em órbita desde setembro de 2014

OCO - 3

- Revisa a a cada 3 dias em diferentes condições de iluminação
- Órbita de precessão limitada de 53° a 53°
- Em órbita de setembro de 2019

CARACTERISTICAS

Órbita realizada em março
de 2020

NIVEIS

OCO-2 Data Products

Level	Data Product	Data Rate	Frequency
1B	Orbit granules of calibrated radiances	19.95 Gbytes/day	30 days
L2 DP	Orbit granules of solar induced fluorescence	1.70 Gbytes/day	18-19 days
L2Std	Orbit granules of geolocated X_{CO_2}	0.54 Gbytes/day	18-19 days
L2Dia	Orbit granules of geolocated X_{CO_2} , screened for quality	11.95 Gbytes/day	18-19 days
Lite	Daily files of geolocated X_{CO_2} , screened for quality	N/A	N/A
3	Global X_{CO_2}	N/A	N/A
4	Global CO ₂ sources and sinks	N/A	N/A
